

IN THE CLAIMS

Please amend claims 1 and 18 as follows.

D  
B

1. A device for air-conditioning a passenger compartment of a motor vehicle, comprising:  
a refrigerant-fluid circuit including a compressor, a condenser serving as a heat sink and a first evaporator serving as a cold source, the device further including a heating radiator and a second evaporator and switching means for selectively routing fluid flow between one of and both the first and second evaporators depending on a required cooling power, the first and second evaporators being traversed on after the other at least partly by an airflow to be cooled; wherein said heating radiator and said second evaporator form a compound heat exchanger comprising two fluid chambers arranged on either side of a bank of tubes.

18. A device for air-conditioning a passenger compartment of a motor vehicle having a refrigerant fluid circuit comprising:

D  
B

a heating radiator;

a compressor,

a condenser serving as a heat sink;

a first evaporator serving as a cold source,

a second evaporator; and

a switching mechanism disposed to selectively route fluid flow between one of

and both the first and second evaporators depending on a required cooling power; wherein said heating radiator and said second evaporator form a compound heat exchanger comprising two fluid chambers arranged on either side of a bank of tubes.
